

IndyLink offers commercial domain hosting (*www.yourbusiness.com*, *.net* or *.org*) on our secure server for an annual fee of \$150. This service includes ten POP accounts\*, an unlimited number of email aliases\*\*, and 50 megabytes of disk space.

There is a one-time set-up fee of \$25 that covers registering a domain name for you or transferring a domain you already own to our server.

Some businesses purchase the alternate domain extensions in addition to their primary, top-level domain (for example, you wish you use *www.yourbusiness.com*, but you also buy *yourbusiness.net* and *yourbusiness.org* and have visitors to the *.net* and *.org* domains automatically forwarded to the *.com* domain). IndyLink can provide this domain forwarding service for a \$25 annual fee per domain in addition to a \$25 per domain registration fee.

If you need more than the standard 50 megabytes of disk space, each additional 20 MB block costs \$10 annually. Additional POP accounts each cost \$15 annually.

Domain hosting allows the use of cgi scripts, FrontPage extensions, and secure certificates. Secure certificates require an IP address be dedicated exclusively to your site and therefore entail an additional \$50 annual fee. Domain administration, such as assigning or changing email addresses, is done by you or your designee.

IndyLink will provide technical support only to the site administrator whose name is entered on this form. Others you give permission to use email or upload files to your site will need to seek assistance from your site administrator. Also, IndyLink cannot be responsible for technical assistance with third-party products or software.

IndyLink reserves the right to modify these rates due to the addition or removal of services or maintenance cost changes. Because you are given access to our computer system, signing this form indicates that you will comply with these terms as well as IndyLink's User Policies. In signing this form, you also agree to be responsible for the actions of all those to whom you grant access to our system or the email accounts associated with your domain.

***We encourage you to support your community network by using IndyLink as your ISP!***

\* POP accounts are email addresses (*yourname@yourbusiness.com*) with separate mailboxes and passwords.

\*\*Email aliases look like unique email addresses but do not have their own mailbox. They direct mail to an alternate address.
